

Rage Against The Radio

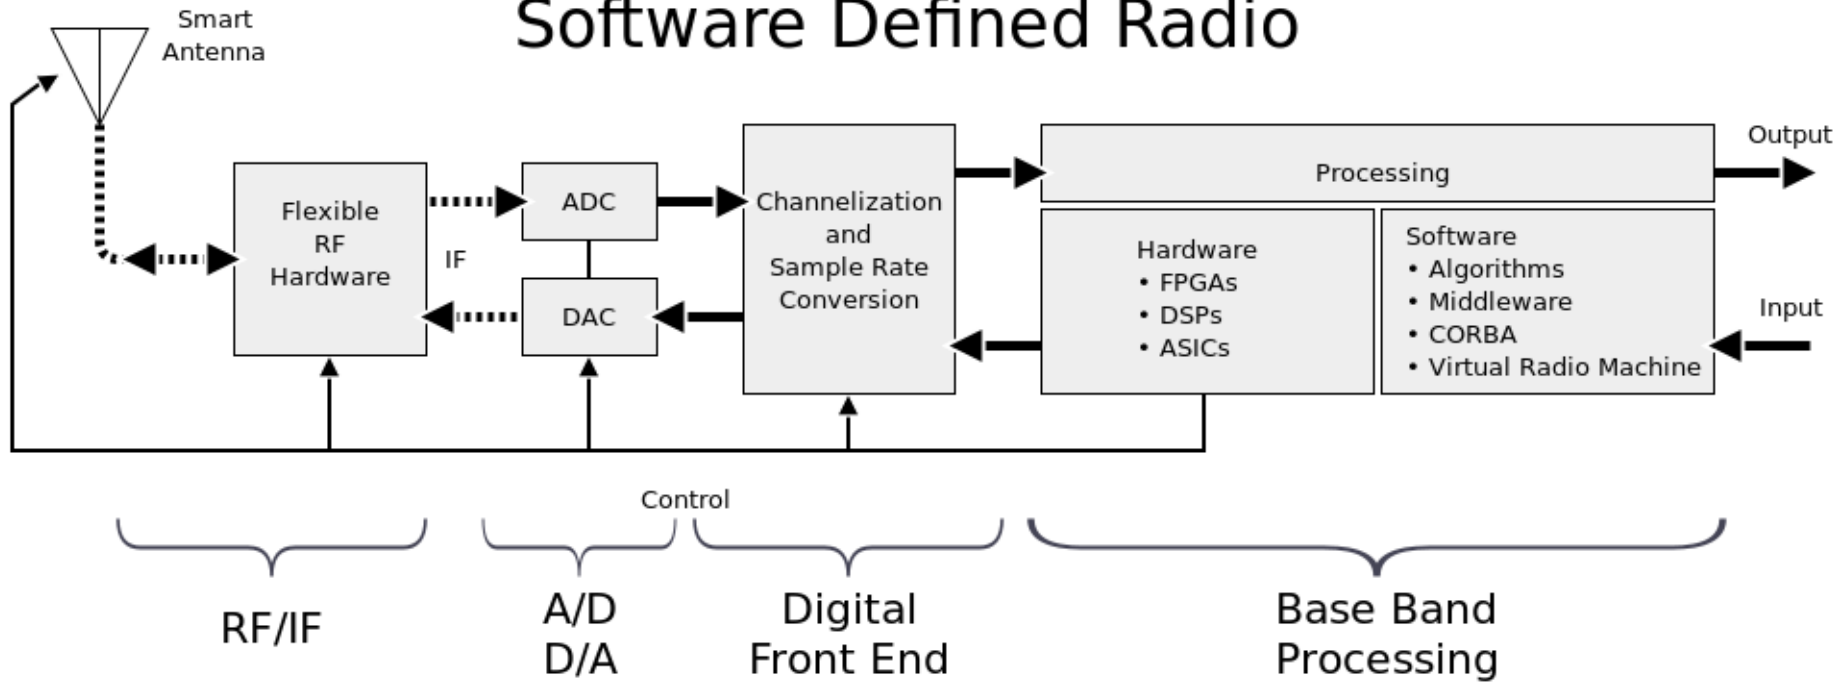

Stefan Kiese, skiese@ernw.de, [@net0SKi](https://twitter.com/net0SKi)
04.11.2016 – IT-SeCX, St. Poelten, Austria

About Me

- Security Analyst and Researcher at ERNW in Heidelberg, Germany
- Background in electronics
- Love to play around with technical stuff; not only electronics

Software Defined Radio

SDR – A Definition

Wikipedia says:

- “Software-defined radio (SDR) is a radio communication system where components that have been typically implemented in hardware (e.g. mixers, filters, amplifiers, modulators/demodulators, detectors, etc.) are instead implemented by means of software on a personal computer or embedded system.”

Source: https://en.wikipedia.org/wiki/Software-defined_radio

...or even shorter:

- "Radio in which some or all of the physical layer functions are software defined"

Source: <http://www.wirelessinnovation.org/assets/documents/SoftwareDefinedRadio.pdf>

Pros and Cons

Mostly depend on specific use case.

Pros

- Very cheap (when RX only! E.g. RTL-SDR ~15€)
- Still cheap (starting between 300 - 800€) considering capability
- High flexibility
- ...

Cons

- Expensive considering mostly used/needed features
- Not easy to use without RF knowledge
- Difficult, when it comes to timing sensitive things (e.g. frequency hopping)
- Often time intensive
- ...

Tools

What you need to get started.

Hardware

- RTL-SDR (RX-only)
- HackRF One (half-duplex)
- bladeRF
- USRP

Software

- GNU Radio Companion
- GQRX
- Baudline or Inspectrum
- Audacity
- Python

Open Source Modules / Implementations

- GSM
- LTE
- GPS
- Bluetooth (LE)
- DVB
- Zigbee
- Z-Wave
- TI CCxx
- NRF24
- ...

ERNW
providing security.

Targets

What could be attacked?

Targets

- Everything “smart” (dogs, cats, babies, phones, watches, houses, cities, meters,...)
- Everything “IoT” (dogs, cats, houses,...)
- Everything connected (also wired! Like your cable TV @home)

War Stories

The Stories

- GPS Spoofing
- Unlocking a car
- Disarming an alarm system
- Keystroke injection over the air
- Tire Pressure Monitoring Systems (TPMS)
- GSM

GPS Spoofing

Setup

- HackRF One or another SDR
- (Signal generator)
- gps-sdr-sim (<https://github.com/osqzss/gps-sdr-sim>)
- Smartphone or GPS mouse + app

How to Open a Car – 90s Style

...and what shouldn't be possible anymore.

Setup 1

- Some TX-capable SDR
- Software
 - GNU Radio
- or
- Simpler solution: Software delivered with the SDR's driver, like `hackrf_transfer`

Options

ID: alarm_record
Title: alarm
Generate Options: QT GUI

Variable

ID: samp_rate
Value: 2M

Variable

ID: capture_freq
Value: 433.63M

Variable

ID: target_freq
Value: 433.93M

Variable

ID: cutoff_freq
Value: 30k

Variable

ID: trans_width
Value: 50k

osmocom Source

Sample Rate (sps): 2M
Ch0: Frequency (Hz): 433.63M
Ch0: Freq. Corr. (ppm): 0
Ch0: DC Offset Mode: Off
Ch0: IQ Balance Mode: Off
Ch0: Gain Mode: Manual
Ch0: RF Gain (dB): 14
Ch0: IF Gain (dB): 20
Ch0: BB Gain (dB): 20

QT GUI Sink

FFT Size: 1.024k
Center Frequency (Hz): ...93M
Bandwidth (Hz): 2M
Update Rate: 10

File Sink

File: ...secx/sdr/ring-1.dump
Unbuffered: Off
Append file: Overwrite

Simple flowgraph to record a signal w/o any filter

Options

ID: top_block

Generate Options: QT GUI

Variable

ID: samp_rate

Value: 2M

Variable

ID: replay_freq

Value: 433.63M

File Source

File: ...secx/sdr/ring-1.dump

Repeat: No

QT GUI Sink

FFT Size: 1.024k

Center Frequency (Hz): 0

Bandwidth (Hz): 2M

Update Rate: 10

osmocom Sink

Sample Rate (sps): 2M

Ch0: Frequency (Hz): 433.63M

Ch0: Freq. Corr. (ppm): 0

Ch0: RF Gain (dB): 10

Ch0: IF Gain (dB): 20

Ch0: BB Gain (dB): 20

Simple flowgraph to replay
a signal w/o any filter

Setup 2

- Yardstick One
- rfcats

Setup 3

- Arduino (3 – 25€) or Raspi
- 433MHz Transmitter and Receiver (5€)
- Firmware

Setup 4

- Some 5€ RF keyfob from e.g. ebay
→ Easily clone other keyfobs

Why does this *technically* work?

- No use of rolling code or other security mechanisms

Disarming Wireless Alarm Systems

What's possible?

- Jamming signals from sensors, like on the windows, doors or even motion detector
 - This often works, because many of the alarm systems work unidirectional only or are w/o sth. like “still alive” signals
- Replay attacks
 - Many lack rolling code implementations
- Analyze signal and do whatever you want
 - That's why we use SDR! 😊
- DoS them

Setup 1

- Some TX-capable SDR
- Software
 - GNU Radio
 - or
 - Simpler solution: Software delivered with the SDR's driver, like `hackrf_transfer`

a signal w/o any filter

- Same setups as mentioned before.
- Same problems as mentioned before?
 - It's even worse!
 - Many alarm systems on the market are imported from e.g. China and sold under \$brand, which often means bad support (and no reaction on vuln disclosure), because nobody wants to be responsible

Your Wireless Desktop

Please don't use wireless keyboards or mice at work (or at home)!

Why you shouldn't use them?

- Ever thought about the difference between wired and wireless? ;-)
- Let's assume:
 - Wired == local
 - Wireless == remote
- So, one does not need to tamper things locally on your PC
- Don't blindly trust "AES" imprints on boxes

Setup

- SDR
 - or
- Some custom radio dongle, regarding the target

Example Setup for Logitech / Microsoft

- (SDR – similar to BT LE; AFAIK not easy regarding channel hopping)
or
- USB radio dongle with NRF24 chipset, like Logitech Unifying Dongle or Crazyradio Dongle
or
- Some other radio with NRF24 chipset w/o USB + Raspi or Arduino
- Bastille's excellent NRF Research Firmware

What's possible with this?

- Jamming...
- Eavesdropping in some case

The most interesting thing (from my perspective):

- Keystroke injection! 😊

→ That's why I don't use a wireless presenter today ;-)

TPMS

(Tire Pressure Monitoring System)

Facts

- Sensors need 125kHz signal to wake up
- Data transmission via 433MHz signal

What could you do?

- Wake the sensors up (only short range)
 - Well, that's boring...
- Spoof them.
- Fuzz them. Effects to the car? Unknown, should differ ;-)

Setup

- SDR and GNU Radio or some custom tool
or
- Arduino and 433MHz transmitter

Source: sysmocom.de

GSM

What could you do?

- Build up a fake cell (BTS)
- IMSI catcher
- IMSI catcher catcher ;-)
- Sniff GSM
- Fuzz sth. over the network
- ...

Setup

- SDR
 - When sniffing only, cheap RX-only SDR works fine
 - Full duplex needed to act as Base Transceiver Station (BTS)
- Dedicated BTS
- Sure, some software, e.g. from osmocom

Demo Time

Thank you for your Attention!

Any questions?
